DETAILED ACTION

Allowable Subject Matter

1. Claims 1-11 are allowed.
2. The following is an examiner's statement of reasons for allowance:

Applicant's invention claims a power supply device is to enable an overheat protection level and an over-voltage protection level to be set accurately. This power supply device includes a Schottky barrier diode, which is placed as a temperature detection element at a region where a temperature is measured, to which a reverse voltage is applied, and through which a reverse leakage current flows; a comparator which sets a potential of an output terminal thereof to a low level when a voltage corresponding to the reverse leakage current becomes equal to or more than a reference voltage; and a light-emitting diode which is connected between an output terminal and the output terminal of the comparator, and has a current of a predetermined value or more flowing therethrough to emit light because the output potential of the comparator is set to the low level, wherein an operation of a control circuit is stopped by a thyristor which is turned on, based on the current flowing through a phototransistor PC1, in response to the light emission of the light-

emitting diode. None of the cited art over comes the claimed limitation of the instant application.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
